Brief Problem Discovery Note

Business Name: Quick Start Driving School

Location: Ayeduase Gate, Kumasi

Sector: Education (Driver Training)

Observed Problem

During our initial site visit and observation, we discovered that Quick Start Driving School relies heavily on manual processes to manage its daily operations. Student registration is completed using paper records, while cash inflows, expenditures, and other financial transactions are recorded manually. This approach makes it difficult to keep accurate and up-to-date records, retrieve information quickly, and monitor the school's financial activities efficiently.

As the number of students increases, these manual processes become more time-consuming and prone to errors such as misplaced records, duplicate entries, and inconsistencies in financial reporting. The lack of a centralized digital system also limits management's ability to track student information and generate timely reports for decision-making.

Why It Matters

The identified problem affects the efficiency and overall management of the driving school. A digital solution would streamline student registration, improve the recording and tracking of income and expenditures, reduce human error, and provide better transparency and accountability in financial management. It would also save staff time, improve record accessibility, and support informed decision-making, ultimately enabling the business to operate more effectively and provide better service to its students.
